Alright, so it's very hard for us to always time exactly what's going on. We can try most of the time, especially once we know someone's game, but many times they can surprise us. So if my partner did a good job, he got the underhook, or maybe we fell on a scramble, and then we already fell on this position, okay? So he's trying to play the half guard with the underhook here. I do not want to wait here too long. The longer I wait, the harder it will be for me to stop him, especially if he starts shifting my weight to this side, now he has a much better position than me. So from here, what I want to do, I want to start pinning his elbow, okay? It's very important that I use my right hand to go back and control his elbow, okay? So I go one, turn my hand, and I hold his tricep. Once I can make this grip, I'm really making his underhook a lot weaker from this position. From here now, I'm going to just shoot my head up, one, okay? I bring his arm with me. It's very, as you get to this point, his elbow points up to the ceiling. He's very weak of pulling the arm this way, okay? He has very little leverage of being able to free this, and I just keep it nice and tight. From here, my weight, I'm always kind of pulling him a little bit into me, but not leaning back, just the arm. Switch, one, okay? Elbow to elbow, everything's nice and tight, let go, hold the wrist, and I hold the wrist. From here, switch for a kimura grip. Kimura grip is one of the best grips that we have in jiu-jitsu. Even if you don't finish, most of the times, you will be able to use this to fall in a really good position. From here, there's no reason why not to finish. Just keep the elbow close to your body, push the hand back, and you will have the finish from there. So he did a good job, he used the underhook, boom, he's on this position, okay? You have to address this right away. So first thing you do is trap the elbow. This will stop him from getting deeper underhook, and you have a good control, okay? It's important that when you want to lift the elbow up, this knee cannot be too far back, because you won't have a good base, so fight to get your knee inside a little bit. One, so now I can go up. If this knee's back, if I go up, I'm going to fall forward, and that's not what I want. So, underhook, control, my knee comes in, up, one, hold, hold the wrist. From here, we have the push to finish, and it's a great and powerful move to get from there.
